NAMES AND NUMBERS

The question how many composers are represented in EG's pages is easily asked but less easily answered. For example, are Komai and Comay two composers or one? Some account of EG's spelling of names, possible because one person has been responsible for a quarter of a century (a situation which may never recur) may therefore be useful. The principle we consciously tried to follow is to repeat the native spelling where possible, and otherwise to approximate in educated English to the pronunciation while bearing in mind both traditional spellings and the presence of a majority of non-English readers of EG. We have learned 'on the job' and have tried to be consistent. Of course we failed. Alphabets, syllable stress patterns (including their absence), pseudo-similarities, strange diacritics, and linguistic ignorance have all contributed to our failure. A challenge which thankfully I never encountered was the spelling of the name of a Chinese composer, because up to now there have been none. My successors will, I hope, have to sort that out!

Comay (preferred) = Komai,
Komay
Costeff (preferred) = Kosteff
Galushko = Goloshko, etc. (Volgograd composer)
Garayazli supersedes earlier variations

Janosi (now preferred) = Ianosi
Joitsa = Joita
Kondratev (preferred) = Kondratiev, Kondratyev
Olymiev = Olimpiev
Kozirev = Kozyrev
Pogosyants (preferred) = Pogosjants
Senkus is correct (Syankus, Sekus occur in other sources)

MISCELLANY

Genrikh Kasparyan is the father of Sergei Kasparyan. Likewise there are father and son Manyakhin. The several Kuznetsov's and Ivanov/Iwanow's must be kept apart. There is a second contemporary Polish composer named Andrzej Lewandowski in addition to the well known master from Torun. Gul(y)a(y)ev and Grin are one and the same. Afek was Kopelovich. Carvajal Aliaga (EG36.2040) is the Carvajal of EG89.6586, while for similar Hispanic reasons Javier Rodriguez is J.R.Ibran. Benko and Benko are interchangeable, but Benno is not. Belyavsky and Gurgenidze the soviet composers are not the soviet otb IGMs. There are (or have been) several Kovalenko's, two Vlasenko's and Novikov's, while the New Zealander Emil Melnichenko must not be confused with soviet namesakes. Gherman Umnov is not the late Evgeny Umnov, while EG89.6580 is by a third Umnov. Quite apart from the foregoing are

typos, that is, typographical or proof-correcting errors. On balance the spelling in a solution is more reliable than that above a diagram. For example 'Blinka' (EG96.7279), 'Plinka' (EG94 p452) and 'Mlinka' (EG92.6822) are all to be interpreted as Hlinka. These may be 'obvious' corrections, at least to regular readers, but human history and common experience attest that the obvious is often wrong.

Magazines may also confuse. From Slovakia come PAT A MAT (Bratislava) and MAT-PAT (Martin), both of them composition magazines. It does not help that the former's distinguishing motif comprises a 5-letter monogram, namely a vertical MAT crossing a horizontal PAT. If possible, one looks to see how a magazine refers to itself.

used in print or in the hand recording of positions and game scores. The practice is a great convenience for westerners, but western ease of use is not likely to have been the reason for its adoption! One reasonable possibility is that the impetus was technological rather than caissic, a consequence, maybe, of the import of ready-made chess diagram printing techniques from, say, Germany - one thinks of the very old tradition of letters along the bottom and top of the board and numbers down the sides.

Russian took over 'mittelspiel' from German, but 'debyut' from French. Now 'etyud' is French, and again we want to know why - as well as the basic facts.

As one starting-point there is the remarkable fact that the Russian dictionary *Dal'* of the year 1902 includes the chess meaning of

'etyud', while even the largest western dictionaries we have consulted still do not today. Dr Linder helps with facts relating to the first Russians who can be called study composers: A.Petrov, Karl A.Jaenisch and Ilja Shumov. *Découvertes sur le cavalier (Jaenisch)* appeared in French in St Petersburg in 1837, and the same author published studies in his chess column in *Sankt Petersburgskie vedemosti* in 1856. Shumov composed studies in the 1860's, some of them published in *La Stratégie* in France. It has yet to be shown, however, that the word etyud was applied unambiguously in any of these instances.

Preliminary research has taken us just this far. Clearly here is just the subject for a thesis by some diligent researcher with linguistic skills and the funds to commute between the Dutch Royal Library in the Hague and the two major libraries of the USSR (the Lenin Library in Moscow and the Saltykov-Schedrin Library in St. Petersburg). We are serious.

TWO RUSSIAN ENIGMAS

Why did the Russians apparently never use their own alphabet to denote the chessboard files? Their very first chess books (by Ivan Butrimov in 1821 and Alexander Petrov in 1824) adopted the western a-h system. This is surely all the odder, given that the Russian alphabet has no letter 'h' - whence Gitler, Gerbstman, Giskot for Hitler, Herbstman and Heathcote. Subsequently the usage was adopted by the first chess magazine *Shakhmatny listok* (edited by Viktor Mikhailov from 1859 to 1863, and by Mikhail Chigorin from 1876 to 1891) and it has never wavered. The chess historian Dr Isaac Linder of Moscow (in a letter of 16iv90) has kindly traced the foregoing basic facts. So we know some of the who, what, where and when. We still want to know why! There is even the question of the extent to which the Russian alphabet was ever

EG 102.1 'The GBR class 0116 end-game' (pp865-866)

1. The essential indication (of a computer source) *C* was omitted.
 2. Lewis B.Stiller, a 25-year-old graduate of Johns Hopkins University, Baltimore, was greatly assisted by Noam Elkies of the Department of Mathematics, Harvard University. Our apologies to both gentlemen for this omission. The CM-2 *Connection Machine* was located at Los Alamos and used remotely. Stiller and Elkies have not yet actually met face-to-face! [*Thinking Machines Corporation* have recently announced a CM-5!!]
 3. A short article in the November 1991 *SCIENTIFIC AMERICAN* has led to spin-off newspaper publicity including a front-page item in the London *TIMES* (30x91) headed 'At last - white to win in 100 billion moves'.
-

EG 102.1

p859 The Troitzky 3rd Prize diagram (d6/g1) should have wPe5 (not wPe6), and the applicable solution says 'second', despite being printed as third on the page.
 p874 col.1 read: The book is in English so the content is more accessible than the Russian 'A-Z' reviewed above, though whether the volume is more accessible is an interesting question: the Russian edition size contrasts with the few hundred of the Dutch.
 p935 col.2 (top) read: EG97.9394 W also wins if dark WB can be exchanged with check, allowing g2-g3, when wK marches to h6 to win easily.

SNIPPETS

1. A posthumous paper by Selman on reciprocal stalemate has been edited by Jan van Reek and published (in English) in the ARVES series.
2. A long and wonderful collection of Jan Marwitz' studies has appeared in the ARVES series. They are deeply commented and annotated by the composer himself. In Dutch.
3. Jan van Reek's comprehensive *History of Study Composition in the Netherlands* has been completed, sponsors have been found, and publication is imminent. This is in English.

4. The composer of EG 97.739I is a senior Argentinian otb master.
5. *C* Ken Thompson's *BELLE* (a complex amalgam of computer hardware and software) successfully solved 9 out of 10 studies in the EG 63 article (1981).
6. For the record. Volume I of EG (EG 1-16) consisted of 524 pages. Volume VI (EG 83-102) has nearly a thousand.
7. A consolidated index to EG 1-102 is not ruled out, but it is not a commitment, least of all by AJR.
8. For the record, Volume I of EG (ie, EG1-16) consisted of 524 pages. Volume VI (EG83-102.2) has nearly a thousand.
9. A book 'A to Z of Studies' is contracted for publication. As the publisher is Maxwell Macmillan, we must keep our fingers crossed.
Author/compiler: AJR.
10. EG 103 and EG 104 should be with subscribers before EG 102.2. Most awards were prepared by AJR, diagrams prepared by Bas de Heer, and everything else done by Stakhanovite (if one may still use the word as a comp. agent) stand-in editor Jan van Reek. Full steam ahead!
11. Theo van Spijk. EG's printer since EG 3, had af four-fold heart bypass operation in Aug. '91, after two heart attacks while on holiday with his family in Spain. Aged 58, Theo is recovering well. Our sympathy and support reach out to him, to his wife Diny and his son Pascal.
12. *C* All of Henri Rinck's claims to have discovered new draws (not based on the Lolli position) in the GBR class **1060** are erroneous. (See '1414' passim.)
13. Judged by Gh.Umnov, the 10th individual championship of 'Russia' (ie, the Russian Federation, or RSFSR) was won by A.Maksimovskikh with 38 points ahead of V.Kozirev, also 38. Next in order: Kopnin, Anufriev, Gromov, Rumyantsev, Makletsov, Arrestov, Osintsev, Ryabinin, Malyshev, Migunov, Selivanov and Sidorov. These placings in the last-ever such soviet championship are 'final'.
14. *Shakhmatny Bulletin* is now replaced by *Ekspress-Shakhmaty*; *Ceskoslovensky Sach* has breathed its last, no doubt to be replaced.
15. Computer specialist Aleksey Sochniev is now working in South Africa, probably temporarily.
16. The British Chess Federation *Year Book* 1991-92 (in general a unique mine of facts about the contemporary British chess scene) reports on the 1990 Benidorm PCCC and WCSC meeting, but re-locates the whole event to Basildon (a small town in the county of Essex)!!! In 1992 Britain is supposed to know about Europe!

- 92.6858 was chosen (by the above sub-committee using a system of

votes) as 'study of the year' for 1986, just as one of its composers, Maksimovskikh (the other was Dolgov), won the soviet championship - as it happens, the very last one! At the PCCC banquet the soviet solving team expressed shock at this award, alleging the study to be known to be unsound. [Comment: not only had nobody told us, but the Georgians clearly were unaware likewise. Typical poor communication, which we must work in this new world of the Commonwealth of Independent States to improve!] The study (1st Pr, Troitzky '120' MT) is not included in the recent book selecting Maksimovskikh's best studies.

3.2 A procedure for voting for a study for the year 1988 was agreed.

3.3 A set of guidelines for organising formal international study tourneys was adopted as a discussion document.

4. Among the mini-lectures delivered to an ARVES get-together held in a caf some distance from the Inntel Hotel (PCCC venue), and attended by nearly 50 enthusiasts, IGM John

Nunn demonstrated how he has extracted studies from 5-man databases (using a ChessBase interface). The very interesting questions are: who/what has composed them, how ought they to be described, and how should judges treat them if entered for a tourney (this is happening!)?

5. The Match: USSR vs. Rot W still hangs fire. The Moscow and Tbilisi judges have so far failed to submit their ranking lists while the London judges (Nunn and Roycroft) did so in June 1991.

6. WCSC. After the studies solving round was complete it was found that all three studies were defective. The round was then cancelled and the championship (convincingly won by the USSR) decided on problem-solving alone.

7. The *FIDE Album 1983-85* should be out 'any day now'. Just like EG.

8. No one from ARVES was present at Rotterdam to accept EG subscriptions for 1992, etc. We trust that this public relations disaster will not be repeated at any future PCCC meeting.

9. The XXXV PCCC meeting will be held in Bonn (Germany) 22-29VIII92.

 metric' algorithm allocates no priori-
 ty between a checkmating move
 and a winning capture move when
 each is equi-optimal. If there is a
 forced mate in 3 but a forced win-
 ning capture in 2, the latter is prefer-
 red unless the alternative 'metric',
 the 'checkmate metric', is followed.
 Computers handle either metric,
 while human specialists prefer the
 conversion metric until they sense
 mate. In (won) endings against the
 lone king there is by definition no
 'conversion'. It surprises many peo-
 ple when they realise the logical con-
 sequence that chessplayers and com-
 puter programmers will never agree
 on a generally applicable definition
 of 'best move'.

Theme: The *en passant* capture in a

study to win or draw. W makes critical use of the rule of loss of the right to capture if not exercised immediately. In the try wP plays two squares and the refutation is by *en passant* capture. In the *solution* the *en passant* capture is legal but fails.

Roland LECOMTE's article received 31VIII 91
The following article (here translated, condensed and edited by AJR) was prepared by the well known journalist Monsieur Roland Lecomte expressly in connection with the Lyon World Championship stage held in Lyon in 1990. It has not previously been published.

HENRI RINCK
(1870-1952)

Chemical engineer, prodigious chess artist, record holder, and distinguished son of Lyon

The supreme and inimitable work of Henri Rinck, born 120 years ago in Lyon, occupies an immense space in the world of chess: no less than half a century of research into opposing chess force scarcely studied previously, of composition, of verification with meticulous care, ever faithful to his motto 'with willpower, patience and perseverance'. His 190 tourney honours include 60 first prizes carried off in 102 international competitions. Nicknamed 'the Victor Hugo of chess' for the fecundity and quality of his artistic endgame studies, his life and work are hardly separable.

The man. Henri Rinck was born in Lyon 10i1871 at the erstwhile Rinck breweries located at the Cours du Midi (later Cours Verdun) of French parents and a grandfather from Alsace. Educated first as a pupil at the Lyon lyce, and then at the Technische Hochschule ('cole Polytechnique') of Munich in Bavaria where he left with a diploma in chemistry, he entered the Lyon Faculty of Science where he spent two years as assistant to Professor Philippe Barbier in the chemistry laboratory. Thereafter he contributed much to the prestige and image of the tablissements Rinck in the heart and capital of the *département* of Rôhne.

In 1897 in the course of specialist work on chlorophyll Rinck invented a process for the purification of green vegetable oil. He introduced the process first into several plants in Marseille, and subsequently into a large number of refineries for *grignon*

and olive oil in Barcelona (Spain), where he moved in 1900, and where he stayed for the rest of his life.

Rinck's physiognomy expressed calm energy and goodwill. His gaze was both frank and distant, that of a man of action who is at the same time thinker and sensitive poet. From this presence (in both literal and figurative senses) a feeling emerged which compelled sympathy and respect. He died at Badalona (Spain) on 18II 1952, aged 82, after a short but painful illness.

The passion. From the age of 16 Rinck experienced an irresistible leaning towards chess, an inclination and a passion which he was fortunate to be able to combine with his professional career.

Already champion of the town of Lyon he played, and won prizes, in correspondence tourneys organised by the monthly chess magazine 'La Stratgie'. He also won a two-game match against the Algiers chess club, the players of the latter combining in consultation. At 20 his analyses of the Muzio and Kieseritzky Gambits, and the French Defence, were published in 'La Stratgie'. Games played at this time show Rinck's mastery.

Only later, in Spain, through contact with his 'brother in arms' Jos Tolosa y Carrera and with the great problem composer Valentin Marin (they became inseparable friends) did Rinck enter the realm of chess composition - with two-move problems.

The records. Rinck carried 190 major honours in 102 competitions. Rinck was always a striver, never content. He swept the board at Malm (Sweden) 1924 with the first three prizes and first three honourable mentions. And he did exactly the

same the following year, despite all opposition. At Florence in 1925 Rinck took six prizes in another tourney. Enough to put the fear of God into other competitors!

The artist. Rinck's first studies date from 1902. In 1907 his '150 Fins de Partie' was published (there were three editions). In 1919 '300 Fins de Partie', and in 1927 '700 Fins de Partie'.

In the space of 20 years Rinck had scaled the peaks of his chosen art. His style was unmatched, characterised above all by its form, which displays absolute beauty and purity. By this time his name is celebrated in all the countries of the world. 'Les surprises de la theorie' appeared in 1947 in Madrid (in French and Spanish), bringing together 111 endings (and a further dozen) dedicated to his nephew Jacques Rinck, printed in red and black.

The ultimate demanding task, one at which he laboured to his last breath, resulted in final victory (among so many others) over death, when he had the joy, six days before his departure from this world, to hold in his hands the first copy of '1414 Fins de Partie'. In accordance with his wishes the volume accompanied him to his grave. The original edition, published at its author's expense, was made in an edition of 500 copies on 10I1952 by the 'Tipografia La Acadmica' at Barcelona for the author's 82nd birthday. It is a masterpiece, from the standpoint of both form and content. The type was entirely set by hand, the labour of a Benedictine monk, simply not possible today due to the exorbitant cost. Monsieur J. Guisle, the former specialist bookseller of 13 rue Saint-Jacques (Paris 5e) took charge of half this edition, which was sold out

on the spot. The volume is 15cm x 27cm, has 760 pages, 238 of them with diagrams six to a page (at least one masterpiece per page), and 530 for the solutions. The work 'of a whole lifetime is dedicated to the house of Rinck and, in the first place, to its primary representative, Monsieur Jacques Rinck of Lyon'.

1414 Fins de Partie (together with an appendix of a further 26) are as many pearls of which each, polished to the last degree, has the purity and sparkle of a diamond.

An imperishable jewel - and magic, because what strikes us when we examine a study by the Lyonnais master is the improbability of the outcome.

The verdict of his contemporaries, Osip S.Bernstein (an international grandmaster of practical play): 'the artistic study shows that the value of a position, viewed under the lamp of genius, differs from its apparent value. No one has systematised studies as Henri Rinck has. What an enormous task it is to systematise

exceptions to rules, some of which are by their nature intangible! Spirit triumphs over matter, will over fate.' Vitaly Halberstadt (artist, master and eclectic connoisseur of study composition): 'A unique model in the history of the artistic endgame, Henri Rinck possessed in the highest degree qualities which it is rare to meet in one man: genial constructor, penetrating visual acuity, great tenacity, and a remarkable capacity for hard work. His clear methodical mind gave him the tranquil assurance that he had worked well. Russian folk-lore has it that the universe is borne on the backs of three great whales. We might say that the trio of whales supporting our little universe of the endgame are in chronological order the Germans Kling & Horwitz, the Russian Troitzky, and the Frenchman Henri Rinck'.

REVIEWS

REVIEW 'The Comprehension of Beauty', by A.K. Kalinin, 160 pages, Moscow 1990, in Russian. Chess compositions by the armed forces, and a book on it, would be unthinkable in any other country, let alone in an edition of 50.000. The study composers include Kalinin himself (represented by 33 studies and very unlucky in EG's Bent JT), Bondarenko (61, many jointly composed studies), Evreinov (30), (Kanonik, a problemist, but conductor of the newspaper Chervony Girnik's tourneys for 30 years), (Fokin, also a problemist but also an influential columnist, this time of Vecherny

Leningrad) Ulanov (5), Razumenko (19), Tolstoy (6), Asaba (32), Nikolay Filippovich Vlasenko (2), Mazur (8). The figures are numbers, not ages!

REVIEW *el arte del ESTUDIO de ajedrez*, by Zoilo R. Caputto, Vol. 1, Buenos Aires, 1990. In Spanish, 318 pages, with many diagrams and copious illustrations. The is no price. The copy under review is one of an edition of 50, numbered and signed. We trust that a larger edition will follow for wider availability. For a private publication this work is of exceptionally high quality, due to intensive and extensive re-

search over at least five years by Professor Caputto who has corresponded far and wide. Academic thoroughness is repeatedly in evidence, especially in the footnotes. There are names and sources which are to be found neither in Bondarenko's *Stanovleniye* nor in Roycroft's *The Chess Endgame Study*. Starting with the origins of chess itself we are taken in this first volume through the mansuba period, the middle ages, the Spanish and Portuguese contribution, the Italian, then the great Italian *School*, the French and English influence, with 1851 as the Kling & Horwitz watershed. The selections from Stamma (18), del Rio (21), Ponziani (9 del Rio's), and Lolli (9) are admirable. The numerous drawings and reproductions bringing together the major nineteenth century personalities enable us to observe that the portraits might have been expressly to intimidate children! A knowledge of Spanish (which we do not have) is needed to follow the text, but there is much pleasure and gain even without. An appendix displays analyses and studies by a selection of 'the modern champions'. A fascinating inclusion here is a piece of the score, not of a game, but of a soprano duet, from the opera *Tom Jo-*

nes by Philidor. The author finally gives a tantalising foretaste of the content of Vols 2 and 3, which will respectively cover modern composers and composing itself.

REVIEW 'The output of a genius', by V. Kirillov, Riga, 1990, in Russian. The introductory matter, including the P-ending win against Capablanca in a simul in Riga in 1913, is the only significant addition to what has already been published in Whitworth's book. The subject is German Mattison. True, Whitworth will envy the edition size of 20,000. There are 53 studies, 5 supplementary positions, a game, 9 problems, an article by Koblents and Mattison's tournament record.

REVIEW 'The Truth-seekers', 128 pages, Kurgan 1991, in Russian, soft cover. Half of this book covers IGM Yu. Balashov's career, while the other half deals with A. Maksimovskikh. Both are local heroes and each seems to have authored his part of the book - aside from the inevitable introductions by otb IGMs! The 64 Maksimovskikh studies range from 1963 to 1987, of which some 15 won high prizes. There are also a few problems and photos.

Recent otb experience with GBR class 0312

1.1 **0312** occurred in Karpov vs. Kasparov at Interpolis, x91, with Karpov having the upper hand. The game was drawn under the 50-move rule, but Karpov found an effective way to drive Kasparov's king to the edge - and came close to winning. Kasparov's defensive strategy of keeping his rook out of harm's way and retreating his king towards the corner not controlled by the bishop is

certainly correct, though his play has a passive flavour. In fact, we learn from Stiller/Elkies, at no point in the play did Karpov have a win.

1.2 There are 52 studies starting with this material in Rinck's '1414'. No solution exceeds 7 moves in length. Mostly they are domination studies. All are meticulously analysed. The following two show the defending king in the good defensive corner (which Rinck states to be a general draw, as opposed to the other corner, which he deems lost).

1.5 The only argument for a general

win (we know now that there is no general win) would be if the defender's king in the good corner can nevertheless be driven out and forced into a bad corner - a process that might take 150 moves. There is a precedent with the 5-man endgame two bishops against knight, where the one consensus draw turned out not to be a draw. With six men we are in new territory as regards computer investigations.

1.0 Data bases for all!

1.1 In ix.90 the 0410 data base came on sale from ChessBase, the company based in (West) Germany. Distributed on a single high density (1.2 or 1.4 megabyte) diskette it is simple to install on a personal computer ('PC'). Except that it makes no attempt to win any drawn position it performs beautifully. The depths of

all moves (1-ply) from the displayed position can be displayed or concealed.

1.2 Further data bases are promised from ChessBase, but there are severe difficulties preventing the compression of data bases (such as 1033 1060 1006 0023) where draws are the exception. This is because every won position has to have an associated depth. However, we look forward to 0014 and 1600/3200.

1.3 Ken Thompson has privately indicated his interest in generating 6-man pawnless databases 'to conversion' (good!), since he has access to new hardware.

AJR has proposed 0321 and 0332, but Ken always makes up his own mind.

1.4 Any 6-man data base needs to be distributed using CD-ROM technology. To attach CD-ROM to a PC costs about £ 500 - at present.

In 91 Ken Thompson distributed twenty-two 5-man endgame databases to friends, using CD-ROM and a Huffman coding compression technique. The CD-ROM itself weighs just half an ounce! The databases are, in GBR code sequence: 0004.10 0005 0014 0023 0104 0400.10 0401 0410 0500 1004 1006 1033 1060 1303 1330 1400 1600 4000.10 4001 4010 4100 5000.

2. Zugzwangs identified by computer.

2.1 Erratum. EG93 p433, rightmost column, item 184. Add bSf7, to make the line read: 184 d7f8 f6f5f7

2.2 There are 17 true zugzwangs in the GBR class 0410, identified for us by Lars RASMUSSEN of Tranberg, Denmark, who is the database programmer of ChessBase. At our request Lars has added the BTM W win depth. WTM draws only - by definition of true zugzwang.

3.5 Fig.5 gives 15 examples of unannotated optimal play (to conversion this time, not ultimate) in 1033. It is noteworthy how some solutions skirt the Karstedt draw, just as optimal play in 1060 skirts the Lolli draw. N represents knight.

5.0 Averbakh (Russian edition, 1982). Every move in 4000.10 was checked. Errors were to be expected and if one includes departures from optimality many (far too many to enumerate) were found.

5.1 Fig.6 shows the position after 3...Qh8 in Fontana and Roycroft (1st Prize, British Chess Federation, 1957 - see 309 in TTC), and the output from the computer.

6. The 10 study positions of the computer micro test reported in EG63 (ii81) were also solved, later, and with great success, by Ken Thompson's BELLE - only one move gave trouble!

7. The sixth conference in the series Advances in Computer Chess took place in London in viii90. The papers are now published. They include 'To make dumb skill endgame data bases speak', jointly authored by Don Beal and AJR.

8. Lewis Stiller (see EG98) discarded his 5-man data bases. And why? Well, why retain what can be regenerated within a minute or two?! What a world we live in, when all that we need is for everyone to have access to the Connection Machine and to be an ace programmer! In addition to pawnless endings Stiller also generated many data bases with a pawn. Bare statistics are in the ICCA Journal.

'The whole impact is in the final
echo, which happens so quickly that
it might even be overlooked: wB
sacrifices for a stalemate where bS is
pinned, and wS sacrifices for a stale-
mate where wB is pinned. This logi-
cal symmetry occurs in pure, paw-
less form, and all pieces move.
True, to be a top class study some-
thing additional is desirable, but
there should be no complaints about
this placing.' An earlier version (with
wKg2) provisionally took 1st Prize in
the Mandil MT (1979-80) award (see
EG71 for the final), but this allowed
the fatal dual draw 4.Kf3 in the main-
line.

'In making his award the judge has
restricted his activities to the twin-
functions of (a) identifying anticipa-
tions, and (b) ranking. He has not
tested the studies for soundness,
believing that this is not the prime
responsibility of a judge -- although
some talented judges nobly accept
this burdensome additional chore.
He acknowledges his debt to SSZ sol-
vers.

'Just 17 studies remained after the
efforts of SSZ solvers had revealed a
number of unsoundnesses, and after
a few others had also been eliminated
for reasons of duals or relatively low
interest value, this latter criterion
meaning clearly anticipated or of tri-
vial content in the context of an
international tourney.'

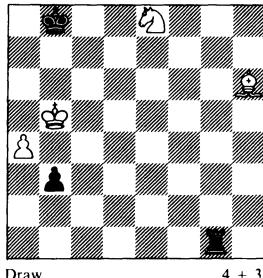

Using scissors and paste, the judge
concocted a 'scroll' of all 17 dia-
grams and solutions and comments

No. 8195 B. Neuenschwander (xii.81)

Schweizerische Schachzeitung,
1981-82

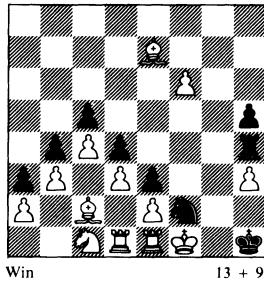

No.8195: Beat Neuenschwander (Switzerland). 1.fg hg + 2.Kxg6 f1Q 3.Qg7+ Sxg7 4.hg mate. The en passant capture can be demonstrated to be legal by considering all of Bl's possible alternatives to g7-g5; on his move to create the diagram. d7-d6; is ruled out by bSg8, which cannot be the result of a promotion, and f6xe5; implies that Bl has made 6 captures, which is ruled out because wBB, since they move on light and dark squares, cannot both have been captured by bPP.

'The wealth of possibilities offered by the studies genre can make a mockery of a straightforward tourney award. Judges have long recognised this fact, and have developed the custom of awarding 'Special' prizes, 'Special' honourable mentions, and 'Special' commendations - and even placing together special sections altogether, for instance of 'miniatures' (maximum of 7 men on the board), although the tourney announcement may have made no mention of such separation. In the present tourney two studies stand out as candidates for special treat-

ment, both as it happens by Beat Neuenschwander. My personal opinion is that composition prizes should not be awarded for difficulty of solution, but there is no doubt that if such a prize were to be awarded it would go to No.8196. ... The ingenious introduction is a solution on its own, but artistically it is not related to the quite incredible main line contortions.

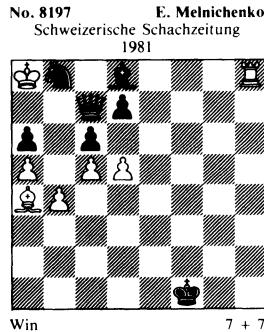

No.8195: seems to be different: It is a splendid introduction to the field of retroanalysis in the study, for it has many of the latter's standard components without the drawbacks of lengthy justifying variations'

Columnist Kuznetsov decreed that this genuine 1986 study qualified for the 1987 tourney because Sumbatyan disqualified himself in 1986 - by being that year's judge! A different way to resolve this ethical dilemma is for a second judge to be responsible for judging a judge's entry. An alternative alternative is for the study not to compete in any tourney. To my mind the 'second judge' solution is the best as being fairest to all concerned - and the tidiest, for it causes least confusion in the long run, since only one question has to be answered, namely: how did a judge judge his own entry?

The final study in the American award was not clearly identified: we read 'Rusinek' and '1574', but the latter is by Brieger. However, the adjacent Rusinek numbered 1575 is a nice pin stalemate number, so I'm assuming that's the one that Benko chose. The Brieger started with a capture.

With acknowledgement to the *ICCA Journal* (1 of 1992) we reproduce the first computer-generated (Stiller, Elkies et al.) reci-zugs in a 6-man ending.

***C* GBR class 1300.01**

This startling sample of optimal play in the 5-man endgame queen against rook and pawn, a classic hunting-ground of endgame theory, is due to Lars Rasmussen of Denmark. The annotations were readily extracted with the user-friendly *ChessBase* interface. The commentary is largely Rasmussen's also.
